FINNIUS

Factsheet Cyber Incident at Your Financial Institution

13 November 2026

1 MINUTE

Cyberattacks are an everyday occurrence. According to the AFM in Trend Monitor 2027, they are one of the most acute systemic risks for the financial sector. Hacks at crypto platforms, DDoS attacks on payment service providers and data breaches at partners of major banks are constantly in the news.

A hack or outage can lead to stolen customer data, financial loss, reputational damage and critical questions from supervisory authorities.

Finnius regularly assists financial institutions dealing with cyber incidents. In our factsheet, we share four practical tips for handling cyber incidents correctly and adequately, in order to avoid supervisory law consequences. You can download the factsheet “Cyberincident at your financial institution” here.
